

Listing of the Claims

1 (Original): A method for exchanging data between a source location and a destination location comprising the steps of:

 generating a data file with a markup language in accordance with a predetermined schema;

generating a first software envelope containing the data file;

transmitting the software envelope to the destination location; and

creating an object from the data file with a plugin object corresponding to the predetermined schema.

2 (Currently Amended): The method of claim 12, further including the step of:

automatically generating a second software envelope from the information contained in the first software envelope.

3 (Original): The method of claim 2, wherein the first software envelope contains destination and source address information and

wherein the step of automatically generating a second envelope includes generating a second envelope having a destination address matching the source address of the first envelope.

4 (Original): The method of claim 2, wherein the first software envelope contains state information and

wherein the step of automatically generating a second envelope includes generating a second envelope having a destination address determined by the state information.

5 (Original): The method of claim 1, wherein the markup language comprises extensible markup language (XML).

*A.5
Client*
6 (Original): The method of claim 1, wherein the markup language comprises standard generalized markup language (SGML).

7 (Original): The method of claim 1, wherein the step of transmitting comprises transmitting the software envelope via electronic mail.

8 (Original): The method of claim 1, wherein the step of transmitting comprises transmitting the software envelope via HTTP.

9 (Original): The method of claim 1, wherein the step of transmitting comprises transmitting the software envelope via an intermediate server.

10 (Original): A computer readable medium having computer-executable instructions for performing the steps recited in claim 1.

11 (Cancelled)

12 (Currently Amended): ~~The A~~ computer readable medium of ~~claim 11~~, further including
having stored thereon a data structure comprising:

- Al
- (a) a data field containing address information;
 - (b) a data field containing the identification of a predetermined schema; and
 - (c) a data field containing a data file formatted in a markup language in
accordance with the schema; and
 - (d) a data field containing manifest information corresponding to the
information contained in the data file data field.

13 (Currently Amended): The computer readable medium of claim 14~~2~~, further including:

- (d) a data field containing state information.

14 (Original): The computer readable medium of claim 13, wherein the state information
contains address information.

15 (Currently Amended): The computer readable medium of claim 14~~2~~, wherein the address
information contains an address for replying to a message.

16 (Original): A method for creating data at a source location to transmit to a destination location comprising the steps of:

generating a data file with a markup language in accordance with a predetermined schema;

identifying a plugin object that creates an object from the data file;

generating a software envelope containing the data file; and

transmitting the software envelope to the destination location.

17 (Original): The method of claim 16, wherein the step of generating a software envelope includes generating a software envelope containing the data file and the plugin object.

18 (Original): The method of claim 16, wherein the markup language comprises extensible markup language (XML).

19 (Original): The method of claim 16, wherein the markup language comprises standard generalized markup language (SGML).

20 (Original): A method for extracting data from a file transmitted from a source location comprising the steps of:

receiving a software envelope containing a data file marked up with a markup language in accordance with a predetermined schema; and

Appln. No.: 09/605,544
Amendment dated April 30, 2003
Reply to Office Action of January 30, 2003

creating an object from the data file with a plugin object corresponding to the predetermined schema.

 21 (Original): The method of claim 20, wherein the markup language comprises extensible markup language (XML).

22 (Original): The method of claim 20, wherein the markup language comprises standard generalized markup language (SGML).
